

AGA Diver Comms Module with Microphone

This combined earphone, microphone and plate assembly permits communications to be added to the Aga/Interspiro Divator II mask by the removal of the front cover plate via two screws. The earphone is subjected to the ambient water environment and so is a sealed, solid moulded assembly.

It contains a sensitive bone-conductor type earphone to provide clear communications to the diver. The microphone is a splash proof high performance unit which is open to the gaseous environment from within the mask.

A range of configurations are available. Contact us with your requirements.

This product has the following available options:
Aga Diver Comms Module with microphone 4-Pin
Aga Diver Comms Module with microphone 2-pin
